

Upgrade 10671

Measuring Head Heating Element

SOLUTION TO REDUCE CONDENSED WATER IN THE OIL MIST DETECTOR MEASURING HEAD

Schaller Oil Mist Detector types VN115/87, VN116/87 and VN215/87 are reliable engine safety devices when correctly installed. False alarms may occur if moisture is permitted to condensate inside the measuring head.

Schaller Automation recommends the installation of UPGRADE 10671 - a self regulating heater which will maintain your measuring head at a constant temperature therefore reducing the possibility of water condensation forming inside the measuring head.

Effectively reduces
water condensation

Quick and easy
installation
